

VividCortex Supports Performance Monitoring for Redis

Identify and solve problems deep within distributed, hybrid databases

Redis is the Swiss Army Knife of key-value databases, making advanced data structures and sophisticated processing techniques simple, powerful, and fast.

With VividCortex, engineering and development teams can see under the hoods of all of their Redis database servers, with more clarity and depth than ever before. Quickly analyze and surface relevant insights, so you can proactively fix performance problems and reinforce your application on Redis. To get started installing VividCortex on your Redis system, contact sales@vividcortex.com.

Insight Into Redis Queries

Don't waste hours analyzing Redis query logs or manually executing and testing queries. VividCortex measures every single Redis query that executes in production, in microsecond resolution, tracking latency, throughput, errors, and more.

Deep, Effortless Drill-Down and Zoom-in

Capture a complete view of your systems, so you don't miss relevant indicators of current and future performance issues. A visual zoom-in interface with deep drill-down, 1-second granularity, and smart analytics help engineering teams diagnose and solve problems faster.

Monitor Vital Redis Metrics

VividCortex measures everything about your system. Not just a few INFO counters, but everything. In addition to every metric exposed by Redis, VividCortex monitors and classifies multi-dimensional data on every query, process, disk, CPU, and many other system components.
